DESCRIZIONE MATERIALE:

PVC autoadesivo luminescente per la produzione di etichette. Applicato su PVC rigido o su ALLUMINIO per la produzione di cartelli. La luminescenza è ottenuta da pigmenti di solfuro di zinco (prodotto non tossico né radioattivo) che vengono attivati da una sorgente di luce. In casi di black-out l'intensità luminosa dei prodotti luminescenti permette una buona visibilità.

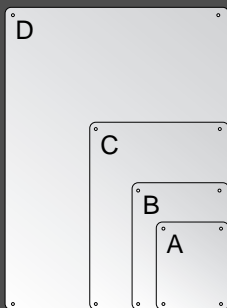

Ne sconsigliamo l'uso in ambiente esterno.

La segnaletica luminescente è prevista dal D. Lgs. 493/96 all. II punto 2,1... Ferme restando le disposizioni del D. Lgs. 626/94, in caso di cattiva illuminazione naturale sarà opportuno utilizzare colori fosforescenti, materiali riflettenti o illuminazione artificiale.
